

BER-A-15S/17S

● Pressure Measurement
● 500 kPa to 5 MPa

Wall-surface Soil Pressure Transducer

Suitable for surface-of-a-wall soil pressure measurement of a small shield machine.

- Wear of the pressure-sensing surface does not affect output or initial values.
- Load cell-based design is less affected by bending effects.
- This is for granular material pressure measurement whose particle diameter is about $\phi 3$.

This is the small and lightweight wall-surface soil pressure transducers which made the most use of the feature of BER-A-12. 2 models (15S, 17S) are available to suit the installation directions.

To Ensure Safe Usage

Do not apply a load more than the rated capacity (Pressure, load) to the applied pressure surface.
